BILLET UPPERS AND LOWERS

THEY PUT THE RUGGED IN RHINO.

Custom designed for durable operation, Rhino upper and lower receivers are precision machined from Aerospace Grade 7075-T6 aluminum. For further performance and strength, they're then coated with Type 3 hard coat anodize. What's more, our custom designed and machined bolt and carrier group is nickel boron coated for hardness that surpasses chrome (68-72 Rc) at an extremely low coefficient of friction (.04).

TRIGGER GROUP

DESIGNED TO PERFORM, NOT JUST WORK.

Providing flawless and precise operation, our trigger groups are custom manufactured from hardened tool steel and then nickel boron coated.

BARREL

"MATCH GRADE" FOR UNMATCHED ACCURACY.

With "Match Grade" status, our barrels are designed to deliver the highest level of accuracy and performance, with a $\frac{1}{2}$ " MOA accuracy at 100 yards. Our precision deep-drilled barrels are also reamed and honed prior to the application of a final melonite coating. This coating outperforms chrome in government protocol M4 testing, while providing a more consistent surface coverage.

THE CALIFORNIA KIT

FOR A SHOT HEARD 'ROUND THE NATION.

Featuring a specially designed Rhino Tool, 10 round magazine and custom operating instructions, our patent pending California Kit offers an option that makes all Rhino weapons legal.
